Colorado Ski Safety Act

Under Colorado law, it is a skier's responsibility to know the risks involved in skiing. Skiers should be aware of the risks involved in skiing and take appropriate precautions to avoid injury to self or others. The law places the burden of responsibility on skiers, and they are expected to exercise due care to avoid injury to themselves or others.

California does not allow the public use of unmanned aircraft systems (UAS) within its ski areas.

The areas listed as ski area features are areas throughout Monarch Mountain that may contain steep terrain, rocks, trees, and other hazards. It is important to be aware of these features and avoid them. The areas listed as ski patrol patrol can be found throughout the ski area. It is recommended to be aware of these areas when skiing.

On the Monarch Mountain map, the green star represents a ski area feature, and the red star represents a ski patrol patrol area.

On-Mountain Safety

Avalanche Risk

Avalanches are an inherent risk of the winter sport. It is important to be aware of the risk of avalanches and to take appropriate precautions to avoid injury. The risk of avalanches can vary depending on the snow conditions and the location of the ski area.

Tree Wells & Snow Immersion

Tree wells and snow immersion can be dangerous. It is important to be aware of these areas when skiing and to avoid them.

Unmanned Aircraft Policy

Monarch does not allow the public to use unmanned aircraft systems (UAS) on or within any of its ski areas. It is important to be aware of this policy and to follow it.

Skier Responsibility Code

The Code of the Skier is a list of rules that are designed to help prevent accidents and injuries on the ski slopes. The Code is based on the principles of personal responsibility and is intended to promote safe skiing.

Colorado Ski Safety Act

The Colorado Ski Safety Act is a law that is designed to protect skiers and others on the ski slopes. It is important to be aware of this law and to follow its requirements.
